
Teagasc Directory of Silage Additives, 2005.

AGRICULTURE AND FOOD DEVELOPMENT AUTHORITY

Teagasc directory of silage additives, 2005.

Products in the 2005 directory are divided into six groups; (1) Acid based; (2) sugar based; (3) enzymes; (4) enzyme/salt mixtures; (5) salts and (6) inoculants.

The details on composition and application rates were supplied to Teagasc by the manufacturers/distributors and were not

independently verified by Teagasc. With such a large number of products available, farmers are strongly advised to consult their Teagasc adviser before deciding on a product.

Application rate

The correct application rate appropriate to the ensiling conditions is very important. Wet weather greatly increases

the weight of fresh grass at harvesting. Since the rate of application is given per tonne of grass, it is vital that rates take account of moisture content at harvesting. The application rate shown on the directory is that given by the manufacturers

Teagasc advisers may recommend different rates for specific ensiling conditions.
